

Choose the Most Effective Weapon against Imperfections

Tangible improvements, shorter sessions, visible results: by trusting to DEKA's mini-invasive technology to eliminate skin imperfections, even in the case of extensive lesions and applications in delicate areas, you can now reduce the undesirable side effects associated with traditional phototherapy treatments. DEKA's excellence in the fields of dermatology and aesthetics is the result of years of medical research and meticulous scientific studies. At the end of the session you can return to your normal daily activities without worry.

The Synthesis of Technological Excellence at the Service of Your Skin

DEKA

The Code of Excellence

DEKA research delivers specific and targeted solutions for hair removal, vascular lesions and non-ablative photorejuvenation treatments

THE VERSATILITY OF Nd:YAG LASER AND THE PRACTICALITY OF PULSED LIGHT

Synchro FT, the synthesis of **DEKA's** technological excellence at the service of your well-being, guarantees perfect results. The extreme versatility of the system ensures the best solution for many of the most widespread problems in the field of dermatology and aesthetics:

- **Vascular treatments** of small capillaries on the face and legs
- **Non-ablative rejuvenation** of the face
- Dark skin spots
- **Hair removal**
- Folliculitis Barbae
- Acne

Synchro FT is extremely simple to use, making it possible to treat even dark or tanned skins with maximum confidence and in total safety.

VERSATILITY MEANS SAFETY

From thin, superficial blood vessels to more extensive and deeper ones, from fine, fair hair to thick, dark hair, from pale to melanin-rich dark phototypes: by tailoring all the parameters and following the most appropriate protocols, your physician can now guarantee the treatment best suited to your needs, operating in maximum safety with reduced recovery times.

CUSTOMISED TREATMENTS FOR EXCELLENT RESULTS

Synchro FT is effective on every part of the face and body, even the most delicate or extensive, on fair and dark phototypes, on all hair types and on a variety of skin imperfections including superficial capillaries and age spots. Each time, the physician can select the system best suited to the type of treatment and your phototype.

Avoid Undesirable Side Effects

The fact that the physician can select the segmentation of the pulse for the application, breaking down the individual emission into as many as three pulses, greatly increases your safety, reducing the risk of reddening and preventing numerous undesirable side effects during the sessions. **DEKA** has also integrated an extremely functional cooling system in all its handpieces: the Contact Skin Cooling technology guarantees maximum safety and practically painless treatments.

A Configuration for Every Application

After selecting the basic parameters, it takes the specialist only a moment to optimise the pulse, depending on the tissues to be treated, and select the perfect configuration for each photorejuvenation or hair removal treatment, all to the benefit of your safety and the effectiveness of the session.
